MARKETING WESTERN NEW YORK PEACHES

REVIEW OF THE 1943 SEASON

Daily market reports on peaches were issued from the Rochester office of the Federal State Market News Service from September 11 through October 5, 1943, and mailed to all requesting them. The information contained in this review consists principally of material from these reports as well as releases from the Crop Reporting Board of the United States Department of Agriculture, State Agricultural Statistician at Albany, N. Y., and from growers and shippers.

Sub-zero temperatures during the winter of 1942-43 killed most of the peach buds in practically all sections of the State and the crop was a near failure in all sections. However, a very light crop was produced in Niagara County and in limited areas near Seneca Lake. Because of this winter injury and unfavorable growing conditions during 1943 the lightest crop since that of 1935 was grown in the State. The Grop Reporting Board estimated the production this season at 95,000 bushels as compared with 1,615,000 bushels in 1942 and the ten year average (1932-41) of 1,398,000 bushels. This was the lightest crop since that of 1934 when the estimated production was only 41,000 bushels because of the severe winter damage during previous winter.

The total production in the United States during 1943 was estimated to be 42,060,000 bushels as compared with 66,365,000 bushels in 1942, while the ten year (1932-41) average for the country was 55,392,000 bushels. This year's crop was the smallest since 1932. All of the ten Early Southern States had small crops. Production in Michigan, Pennsylvania, and New Jersey was smaller than a year ago and below the ten year average. In the Western States the production also was considerably lighter than last year but was above the ten year average.

The marketing of the small crop of Elberta peaches in western New York was one to two weeks later than a year ago because of unfavorable weather during the growing period. F.o.b. prices were extremely high during the entire shipping period. Bushel baskets, crates, and boxes of U.S.No.l stock sold at prices ranging from \$5.25 to \$6.50 as compared with a range of \$1.75 to \$2.50 during the 1942 season. Because of the extremely light crop in the State this season, the light supplies available from other producing states rolled into markets ordinarily supplied by New York stock. The prevailing high prices caused growers to harvest their light crop at the earliest possible time. Because of the extremely heavy demand at harvest time only a very limited amount of stock moved into cold storage and that only remained a very short time.

Only two cars moved from the producing areas of the State this season via rail and the remainder of the small crop moved by truck.

^{1/} For some States in certain years, production includes some quantities unharvested on account of market conditions or scarcity of harvest labor. For peaches, in 1942 and 1943, estimates of such quantities were as follows (1,000 bu.) 1942 - Virginia, 36; California Clingstone, 167; Freestone, 42; 1943-California Clingstone, 292. 2/ Production less than 1,000 bushels. 3/ Includes the following quantities harvested but not utilized due to excessive cullage (1,000 bu.) Virginia, 20; Georgia, 250; California Clingstone, 500. 4/ Mainly for canning.
